Career Objective

Seeking a challenging yet rewarding career with a progressive organization that provides the opportunity for development. I'll try to contribute with my best effort wherever I get an opportunity. Finally, development is my passion.

Skills

- Frontend: React, JavaScript, Tailwind CSS
- Backend: Express JS, MongoDB
- Tools: Git, Github, Croome Dev tools, VSCode,
- Deployment: Firebase, Surge, Vercel

Ex: I'm capable of leading a team. And I feel comfortable in teamwork. I also can work hard and do my best.

Projects

FM Diagnostic Center || [Live Project](#) | [Client repository](#) | [Server repository](#)   Duration: 8 days

This is a Diagnostic center website. Here user can choose any test and booking. After the test admin provides the test result, the user gets it on his/her dashboard. This project is used for medical purposes.

- I am using Material UI for the entire project.
- I am using the react to Print feature in this project. When the admin submits the test result user will get a PDF file that he/she can download.
- Implement dashboard feature and use admin verify system in client site and also server-side through JWT token.

Technology Used: React, Material UI, Express JS, MongoDB, Firebase, Surge, Vercel

Job Heaven || [Live Project](#) | [Client repository](#) | [Server repository](#)   Duration: 6 days

This is a Job seeking website. Here users can find category-wise jobs and apply for this job.

- Using Framer Motion in this project.
- Implement an email contact feature. The user will get an email after successfully applying for a job and anyone can contact the authority by email. I'm implementing EmailJs.
- Implement theme mood. Users can toggle dark and light moods.

Technology Used : React, Tailwind CSS, Express JS, MongoDB, Firebase, Surge, Vercel

Fashion Den || [Live Project](#) | [Client repository](#) | [Server repository](#)   Duration: 4 days

This is the fashion-related website. here users can show specific brand products and buy.

- Using Framer Motion in this project.
- Implement an email contact feature. The user will get an email after successfully applying for a job and anyone can contact the authority by email. I'm implementing EmailJs.
- Implement theme mood. Users can toggle dark and light moods.

Technology Used: React, Tailwind CSS, Express JS, MongoDB, Firebase, Surge, Vercel
